Experience

CrewCapable AI — Chief Technology Officer

June 2025 – Present · Full-time · Remote (Denver, CO) Technologies: TypeScript, Node.js, Python, AWS (Lambda, Step Functions, CDK, S3, Textract, EventBridge, SNS, Secrets Manager, CloudWatch, IAM, SES), Next.js, React, Postgres / Supabase, Docker, LocalStack, GitHub Actions, Vercel, EDI X12, SFTP, Zod, Vitest.

- Own end-to-end technology strategy for an AI-native B2B SaaS that digitizes purchase-order intake; took the platform from zero to production pilot in under 10 months.
- Designed a fully serverless AWS architecture on CDK (10 Lambda functions + a Step Functions workflow across S3, Textract, EventBridge, SNS, Secrets Manager).
- Shipped production integrations with three ERPs (Amtech DAT/SFTP, Epicor P21, QuickBooks) and an outbound X12 850 EDI channel.

Pixelstub Consulting — Founder / Principal Engineer

January 2009 – Present · Self-employed (LLC) · Remote (Denver, CO) Technologies: TypeScript, Node.js, Python, Next.js, React, PHP, JavaScript, SQL / Postgres, Docker, Fly.io, GitHub Actions, Vitest, JWT, Linux, Git.

- Founder of a profitable freelancing LLC operating continuously since 2009, run concurrently with W-2 roles; engagements span web, mobile, data, and DevOps.
- *2025 – Present:* Sole engineer on a fixed-price freelance engagement (under MNDAs) delivering a multi-tenant HVAC load-calculation web platform — Next.js / React / TypeScript front end, Python calc-engine interface, Postgres, Dockerized and deployed via GitHub Actions to Fly.io. Client and project are covered by NDA.
- Earlier engagement: built an LLM-driven image-to-structured-data pipeline for menu-data ingestion.

Panasonic Corporation of North America — Lead Cloud Engineer

December 2020 – August 2025 · Full-time · Remote Technologies: Python, boto3, Bash, AWS (Lambda, SQS, SNS, Fargate, S3, CloudWatch, Cost Explorer), Docker, SonarQube, SAE J2735 / V2X telematics.

- Chaired a cross-team best-practices workgroup across ~50 engineers (OO, SOLID, security, code quality).
- Drove ~30% AWS infrastructure cost reduction via Cost Explorer analysis, tagging discipline, and decommissioning unused resources.
- Built a near-real-time OBU ingress pipeline on Lambda/SQS/SNS; led a self-hosted SonarQube rollout (>50% unit-test coverage gains).

Digital Assets Data — Senior Software Engineer / Blockchain Tech Lead

April 2018 – July 2020 · Full-time · Remote Technologies: Python, Django, React, Pandas, AWS (Lambda, API Gateway, S3, CloudWatch, ECS), Google BigQuery, CircleCI, Docker.

- Technical lead for the blockchain track (1 direct report; team of 2 at peak); owned on-call playbooks and contributed to hiring.
- Built AWS ingestion pipelines (S3/CloudWatch/Lambda/ECS) processing 100 GB nightly with individual files up to 30 GB.
- Implemented Lambda + API Gateway microservices for cryptographic decoding at high throughput.

Employment Verification Notes

The following roles will **not** appear in standard W-2, pay-stub, or third-party employment-verification checks. Flagging proactively so they can be cleared with CoBank in advance:

- **Pixelstub Consulting (2009 - Present) — self-employed.** Verifiable via LLC registration and tax filings (Schedule C / business returns), not via W-2 or an external employer. The 2025-present HVAC engagement under this entity is covered by an MNDA; the client cannot be named, but the contract can be confirmed on request.
- **CrewCapable AI (June 2025 - Present) — CTO.** Early-stage company; compensation is not on a conventional W-2 payroll, so it may not surface through standard pay-stub / payroll verification.

All earlier W-2 roles (Panasonic, Digital Assets Data) are verifiable through normal channels.

Earlier Roles (outside the 7-year window — available on request)

- Havenly — Senior Software Engineer (Nov 2015 - Dec 2017).
- Photobucket — Software Engineer → Senior Software Engineer (2005 - 2009).
